KrebsOnSecurity Hit With Record DDoS

esday evening, KrebsOnSecurity.com was the target of an extremely large and unusual
outed denial-of-service (DDoS) attack designed to knock the site offline. The attack did
ceed thanks to the hard work of the engineers at **Akamai**, the company that protects my
om such digital sieges. But according to Akamai, it was nearly double the size of the
t attack they'd seen previously, and was among the biggest assaults the Internet has ever
sed.

National Internet Defense—Small States on the Skirmish Line

DESPITE THE GLOBAL and borderless nature of the Internet's underlying protocols and driving philosophy, there are significant ways in which it remains substantively territorial. Nations have policies and laws that govern and attempt to

and commercial activity and influence. This is far less palpable than a nation's physical territory or even than "its air" or "its water"—one could, for example, establish by treaty how much pollution Mexican and American factories might contribute to the atmosphere along their shared border, and establish metrics and targets fairly objectively. Cyberspace is still a much wilder frontier, difficult to define and measure. Where
